Editorial Note

We have tried to produce a METHOD SECTION for the Endocrinology Index and have found it difficult to automate. This issue was the first attempt to eliminate by machine what has heretofore been accomplished by human effort. The result was unsatisfactory so an addendum of titles was attached at the end.

The plans for 1970 are to have a more complete section although it may contain articles which do not fall into the criteria we have set up for this section. Any suggestions from users will be welcomed and be considered in our planning of future issues.

Thank you for your tolerance in this improvised section.

PREFACE

The Endocrinology Index is a bimonthly publication of the National Institute of Arthritis and Metabolic Diseases. This selected bibliography which is produced from the National Library of Medicine's Medical Literature Analysis and Retrieval System (MEDLARS), has been iniated to supply those scientists working in the field of endocrinology with a much needed current awareness tool and is intended to help facilitate greater integration of research and clinical efforts in this field.

This publication is available free to National Institutes of Health grantees and contractors working in the field of endocrinology and libraries of medical schools. Requests from these qualified individuals to receive free copies of this publication must include their grant or contract number and the title of their project. These requests as well as address changes and other communications should be addressed to:

Scientific Communications Office
Endocrinology Index
National Institute of Arthritis and Metabolic Diseases
National Institutes of Health
Bethesda, Maryland 20014

Other individuals and libraries may receive this publication by subscribing directly to the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402. Subscription price per year in the United States, Canada, and Mexico, $16.00; foreign, $4.00 additional; and $2.75 for a single copy. Payment is required in advance, and check or money order should be made payable to the Superintendent of Documents.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget on October 7, 1968.

Acknowledgment

The Endocrinology Index was compiled with the cooperation and assistance of the staff of the National Library of Medicine. The citations were processed by the Library's computer-based Medical Literature Analysis and Retrieval System (MEDLARS) and were printed from film composed by Graphic Arts Composing Equipment (GRACE), MEDLARS' high-speed phototypesetter.

EXPLANATION OF FORMAT

The period covered by this issue of the bibliography corresponds to the same months of Index Medicus. The journal coverage is limited to journals covered by Index Medicus, but the Endocrinology Index contains additional subject headings that are not included in Index Medicus. This Endocrinology Index is arranged in seven sections: 1) Table of Contents; 2) Subject Section; 3) Review Section; 4) Method Section; 5) Author Section; 6) Subject Index; and 7) Author Index.

Subject Section

This section is for the reader interested in recent literature related to certain broad topics. The subject section is divided into eight categories (pituitary, thyroid, etc.). The endocrine pancreas has not been included since it is the subject of another recurring bibliography, Diabetes Literature Index. Each category has a preconceived hierarchical organization of subject headings. A particular citation may appear more than once if it deals with multiple topics. Each citation to an article contains the full title, first author, and journal reference. If the article is written in a foreign language, the language is indicated. If the citation is to a review article, the number of references is given.

Author Section

This section provides the reader with a list of keywords or index terms assigned to each citation. In this section each article appears only once. The citations are arranged alphabetically according to first author and are numbered consecutively. These numbers are then used in the Author and Subject Indexes to enable the reader to identify references with ease. The complete citations (including index terms) are found in this section, but only the first three authors are listed. Foreign titles appear in the original language; these titles have been translated into English in the Subject Section. Following each citation are index terms which have been assigned to describe the contents of the article. Index terms appear in capital letters; some of these are accompanied by subheadings which appear in lower case letters; asterisks (*) identify the index terms under which articles appear in Index Medicus.

Subject Index

All of the index terms assigned to the citations appearing in the bibliography are listed, followed by citation numbers which correspond to the numbers in the Author Section. This section is included for the convenience of the reader who wishes to select articles falling in categories of his own conception. For example, one who is interested in protein binding of a particular hormone could quickly find whether there were any articles dealing with this subject by seeing whether there were any citation numbers common to the two headings "protein binding" and the name of the specific hormone.

Author Index

The names of all authors are listed, followed by citation numbers which correspond to the numbers in the Author Section.

ANALYSIS

Effect of polydiethylstilboestrol phosphate on the pituitary content of FSH and ICSH in male rats. Perklev T, et al. **Acta Endocr (Kobenhavn)** 61:449-60, Jul 69

The small-scale isolation and characterization of adrenocorticotrophin. Landon J, et al. **Biochem J** 114:519-28, Sep 69

Solid-phase syntheis and some pharmacological properties of [8-phenylalanine]-oxytocin. Baxter JW, et al. **Biochemistry (Wash)** 8:3592-7, Sep 69

Pituitary regulation of preovulatory estrogen secretion in the rat. Hori T, et al. **Endocr Jap** 16:351-60, Jun 69

Changes in lactate dehydrogenase isozyme patterns of rat anterior pituitary in varied thyroid states. Matsuzaki S, et al. **Endocr Jap** 16:301-8, Jun 69

Prolactin of normal and dwarf mice. Cheever EV, et al. **Endocrinology** 85:698-703, Oct 69

Purification and properties of rat prolactin. Ellis S, et al. **Endocrinology** 85:886-94, Nov 69

Effects of hypothalmic implants of GH on anterior pituitary weight and GH concentration. Katz SH, et al. **Endocrinology** 85:725-34, Oct 69

Colorimetric quantification of the growth hormone and prolactin components of disc electrophoretic patterns. Lewis UJ, et al. **Endocrinology** 85:690-7, Oct 69

Radioimmunoassay determination of luteinizing hormone during the estrous cycle of the rat. Monroe SE, et al. **Endocrinology** 85:720-4, Oct 69

Effects of 17alpha-ethinyl-19-nor-testosterone acetate on pituitary and serum levels of ICSH and FSH in female rats. Kraehahn G, et al. **Europ J Pharmacol** 6:303-11, 1969

Preparation of tissues for localization of sex hormones by autoradiography. II. The loss of radioactive material in embedding media after freeze drying and vapour fixation of the tissues. Attramadal A. **Histochemie** 19:75-87, 1969

Follicle-stimulating hormone content of the pituitary gland before implantation in the mouse and rat. Bindon BM. **J Endocr** 44:349-56, Jul 69

Release of gonadotrophin in ovariectomized mice after exposure to males. Bronson FH, et al. **J Endocr** 44:293-7, Jul 69

BIOSYNTHESIS

Effect of experimentally induced thyroiditis on biosynthesis of thyroxine in rats. Gorman CA, et al. Acta Endocr (Kobenhavn) 62:11-20, Sep 69

BLOOD

The influence of triiodothyronine (T3) treatment on the resin uptake of 131I-triiodothyronine. Dussault J, et al. Acta Endocr (Kobenhavn) 61:441-8, Jul 69

Influence of chlorophenoxyisobutyrate (CPIB) on thyroid parameters. Hansen JM. Acta Endocr (Kobenhavn) 60:294-302, Feb 69

Relationships between blood thyrotrophin level, protein bound iodine and free thyroxine concentration in man under normal physiological conditions. Lemarchand-Béraud T, et al. Acta Endocr (Kobenhavn) 60:315-26, Feb 69

Free thyroxine in serum and its use in clinical diagnosis. Liewendahl K, et al. Acta Endocr (Kobenhavn) 61:343-58, Jun 69

The influence of iodine in thyroid iodine accumulation and turnover in euthyroid Australian subjects. Myhill J, et al. Acta Endocr (Kobenhavn) 62:1-10, Sep 69

Familial elevation of serum thyroxine-binding globulin capacity. Siersbaek-Nielsen K, et al. Acta Endocr (Kobenhavn) 60:130-6, Jan 69

Simplification of determination of serum thyroxine iodine by competitive binding analysis. Nusynowitz ML, et al. Amer J Roentgen 106:791-3, Aug 69

Thyroxine distribution during halothane anesthesia in man. Oyama T, et al. Anesth Analg (Cleveland) 48:715-9, Sep-Oct 69

Recent advances in the diagnosis of the diseases of the thyroid. Rall JE. Clin Chim Acta 25:339-44, Aug 69 (16 ref.)

Comparison of thyroxine-binding plasma proteins of various vertebrates and their evolutionary aspects. Tanabe Y, et al. Gen Comp Endocr 13:14-21, Aug 69

Artifactual elevation of PBI from an iodinated dye used to stain medicinal capsules pink. Bora SS, et al. J Clin Endocr 29:1269-71, Sep 69

Cerebrospinal fluid thyroxine. Hansen JM, et al. J Clin Endocr 29:1023-6, Aug 69

Estimation of thyroxine binding protein capacities using a non-electrophoretic technique. Keane PM, et al. J Clin Endocr 29:1126-30, Aug 69

Parameters of thyroid function in maternal and cord serum at term pregnancy. Robin NI, et al. J Clin Endocr 29:1276-80, Sep 69

Influence of heparin on serum free thyroxine. Schatz DL, et al. J Clin Endocr 29:1015-22, Aug 69

Induction of myxedema by iodide in patients euthyroid after radioiodin or surgical treatment of diffuse toxic goiter. Braverman LE, et al. New Eng J Med 281:816-21, 9 Oct 69
